

## **AY 2021-22 - Institutional Distinctiveness**

The goal of "Excellence in Education" is strongly established in the spirit of SVKM's Narsee Monjee College of Commerce and Economics, and embracing technology has been a long-standing commitment for the college. The college has recognized the potential of technology in instilling knowledge, skills, and sensitivity in young minds. Today, digitization is the institution's distinguishing feature, completely aligned with its objective.

NM has built Smart Board-enabled classroom, outfitted teachers and students with Wi-Fi connections throughout the college campus. The labs are equipped with upgraded computer systems open to teachers and students. The institute's commitment to digitization extends beyond the classroom. A student-specific SAP Portal easily captures and displays attendance and internal continuous assessment marks, enhancing transparency and communication.

Exam SOPs are closely followed throughout the exam process, from application to review and outcomes. Online assessments have been adopted, with department heads allocating scanned response sheets to evaluators. Teachers assess students using the OSM eklavya site, and grades are automatically calculated based on subject-specific marking schemes. QR codes are now been used in answer books. The digital revolution has had a tremendous impact on library services. The library has become a crucial hub for research and learning by providing remote access to online databases, institutional memberships to e-journals, and e-books. Regular updates via Google groups and library mailings keep students informed about the various online resources available to them.

Not only has digitization altered academic operations, but it has also streamlined administrative processes. The management has chosen Oracle Software for efficient human resource administration, enabling staff attendance records and leave applications. The university believes that digitalization ushers in a new era of learning by breaking down conventional barriers and enabling innovative problem-solving methods in all areas of education, teaching, learning, assessment, human resource management, and administration.
